1. About IPOL

1.1 About IPOL

The Iowa Policy and Opinion Lab (IPOL) is a collaborative research group led by Professor Fred Boehmke in Political Science. It was cofounded by Prof. Boehmke and Prof. Kajsa Dalrymple in Journalism and Mass Communication in fall 2020. Student research affiliates in IPOL collaborate to study policymaking and public opinion in Iowa. This includes examining policy choices in the legislative, executive, and judicial branches and collecting and examining data on public opinion among Iowans.

IPOL seeks involvement from students with a wide variety of perspectives and experiences. No prior research experience is necessary, just an interest in learning more about the research process and a willingness to participate in and contribute to the group's progress. Student research affiliates work through training modules to get up to speed on the basics of social science research. We expect and hope that many students stay involved with IPOL for multiple semesters and will obtain and seek out useful skills in research and data analysis over time. IPOL relies on peer mentoring so that more experienced students will help guide and support the work of newer students.

1.2 Acknowledgement and Gratitude

In 2024-2025 IPOL was supported through the Marvin and Rose Lee Pomerantz Chair in Political Science and by the Department of Political Science.

IPOL is grateful for start-up funding in 2020-2023 from the University of Iowa's Public Policy Center (now the Center for Social Science Innovation), including through funding obtained from a Path Forward proposal through the Provost's Office of Engagement and as part of the IowaRise proposal funded through the University of Iowa's Strategic Initiatives Fund in conjunction with the UI Public-Private Partnership (P3).

1.3 Academic year 2024-2025 IPOLers

For academic year 2024-2025, IPOL featured four research groups focusing on different sets of questions from Iowa Poll #213.

Group 1: Devin Ensley (leader), Connor DeGroote, Elijah Exley-Schuman, Molly McCarthy, Jasmyn Jordan;

Group 2: Malvika Khadiya (leader), Layne Kiefer, Austin Sachtschale, Autumn Williams, Hunter Stevens, Emma Skelley;

Group 3: Alli Kazan (leader), Signe Dobbs, Derek McNeill, Ryan Akey, Alexandra Mielke;

Group 4: Madeline Castings (leader), Maddie Patterson, James Valentin, Dave Cacho Serrano, Julia Sillman.

2. About This Report and Iowa Poll #213

2.1 Background on Iowa Poll archives

During academic year 2024-2025 members of IPOL worked to enter and analyze data from some recently unearthed Iowa Polls conducted by the Des Moines Register from the 1940s through the 1980s. These were discovered in the archives of Tom Mans, a 1978 UI PhD in Political Science. Printouts of these Iowa Polls were archived with the Social Sciences Lab at the University of Iowa in the early 1980s. They moved around with Tom for years before Mary Kay Mans shared them with the Iowa Social Science Research Center in 2020.

The collection of surveys included two boxes of survey questionnaires for nearly 100 surveys from 1948 to 1978 and reports along with two tapes on which the data had been stored. We sent the tapes out for data retrieval, but unfortunately nothing useful could be extracted. Fortunately, the boxes contained printouts of the entire data set for about two dozen surveys.

In the fall, student researchers in IPOL worked to digitize an entire survey from scans of the printouts. We double-entered all the data for Iowa Poll #213 from 1974. Details of this process are reported in the appendix. Once the data were ready for analysis, student research teams spent the spring exploring the results to identify interesting sets of questions to analyze. This report contains our findings, divided into two main chapters that group questions based on their thematic content. We summarize those chapters here.

Eventually, we hope to release the data for public use. We have been working with UI Libraries, who house a collection of later Iowa Polls, and the Des Moines Register, which has been very helpful in sharing information on the Iowa Poll in general (see Appendix A for details on the data and our methods to digitize it).

2.2 Iowa Poll #213 (July 1974)

Our report is divided into two chapters, which each focuses on sets of thematically related questions included Iowa Poll #213. These groups of questions were selected by our IPOL research teams. For each question of interest we discuss the main findings and then report on any interesting variation we find based on factors such as respondent sex, party identification, age, and education. Despite

four decades passing since this poll was conducted, the results provide insight into Iowa opinions at the time, issues of concern that the survey asked about, and provide an interesting point of comparison for the present.

2.2.1 National Politics and Issues

We begin with an exploration of Iowans' opinions on various national issues and politicians. Issues analyzed include perspectives on the top problems facing the country, then specific sets of questions on the economy and inflation and another on Federal health care policy.

We then move to approval of the President and Congress followed by a look at early preferences about possible nominees for the 1976 Presidential election and some possible head-to-head matchups.

2.2.2 Watergate

Our second chapter examines Iowans' opinions related to Watergate. This includes opinions related to President Nixon's transcripts of conversations related to Watergate, awareness of the transcripts, and the fairness of media coverage of the transcripts. We follow this with opinions on the impeachment inquiry, including news coverage of the inquiry and possible impacts of impeachment on President Nixon's ability to handle various issues.

3. National Politics

3.1 Overview

In this chapter, we analyze some of the questions in the 1974 Iowa Poll focusing on national politics.

3.2 Top Problems Facing the Country

This section of the 1974 Iowa poll survey asked respondents questions regarding perceptions of major problems in the United States, both at the time of response and in the future. The first question asked respondents what they considered to be the major problem facing the United States today. The following question provided three major problem areas currently facing the United States and asked respondents to identify one they thought would have the greatest impact on America's long-term future.

1. What do you consider to be the major problem facing the United States today?

- *Inflation, economics problems*
- *Lack of confidence in leaders, Watergate*
- *Moral decay*
- *Drugs, alcohol*
- *Crime; law enforcement*
- *Foreign Relations*
- *Shortages, energy crisis*
- *Miscellaneous*
- *Indefinite*
- *Welfare, poverty, unemployment*

2. Here are three major problem areas currently facing the United States. Which ONE do you think will have the greatest impact on America's long term future?

- *Inflationary trend in the cost of living*
- *Watergate and related Presidential scandals*

- *Energy and fuel shortages*
- *Undecided*

In response to the first question, the three major problems most frequently identified were inflation and economic problems, selected by 42.4% of respondents, lack of confidence in leaders, selected by 32.1% of respondents, and shortages and energy crisis, selected by 6.3% of respondents. All other options were selected by less than 5% of respondents.

The majority (42.4%) agreed that inflation and economic problems were the United States' top problem. When comparing response distributions by sex, there was notably little difference between men (42.0%) and women (42.8%). Similar consistencies emerge when comparing by education level; 42.9% of those with no high school experience, 42.2% of those with high school experience, and 42.3% of those with at least a year of college experience came to the same conclusion. These remarkably close proportions suggest that, despite differences in key demographics, an overall consensus was reached that placed inflation and economic problems as the top problem facing the United States.

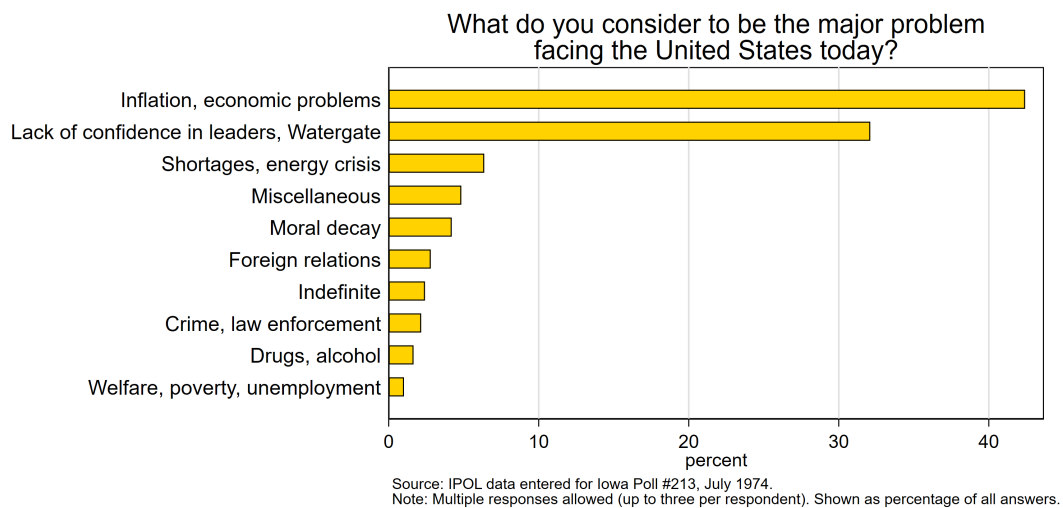

Figure 3.1: Top Problems

In response to the second question, which asked respondents to identify the major problem area that would have the most lasting effects on America's future, inflationary trend in the cost of living was the most commonly selected (54.0%), followed by energy and fuel shortages (30.2%) and Watergate/related Presidential scandals (12.8%). A similar pattern of consistency by respondent sex is present for those who responded with the inflationary trend in the cost of living. Between men and women, 56% of men and 52% of women indicated this same major problem area as their top choice. Additionally, when looking at party identification, 50.8% of Republicans, 54.9% of Democrats, and 55.6% of Independents agreed that the inflationary trend in the cost of living would have the most lasting effects.

3.3 Inflation and the Economy

This section examines selected questions exploring Iowans' views on the economy and inflation during that period. The analysis focuses on public opinion regarding the perceived annual inflation rate, whether wages and salaries kept pace with inflation, and who respondents believed was responsible for inflation in 1974.

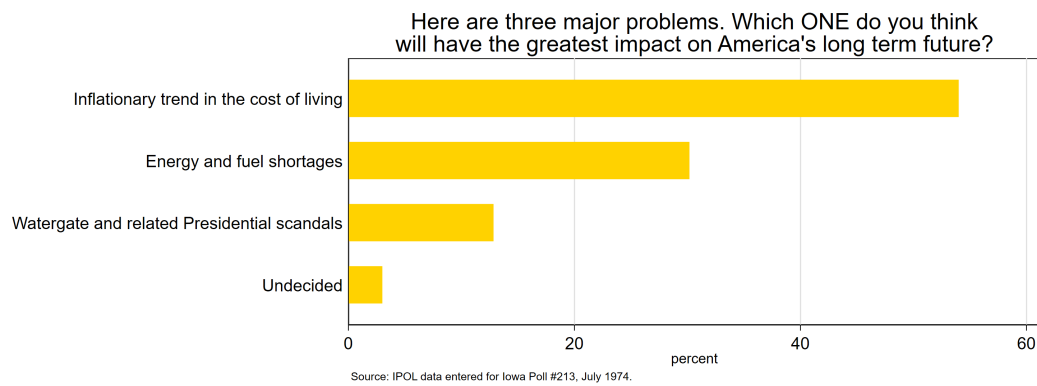

Figure 3.2: Top Problem, Choose One of Three Options

This question asked respondents to estimate the current yearly inflation rate. Of the 601 respondents, the most common response was “Don’t know,” with 54.6% of participants selecting this option. The second most popular response was “20% or over,” chosen by 12.5% of respondents.

30: *Approximately what yearly inflation do you think we have at the present time?*

- 0-5%
- 6-7%
- 8-9%
- 10-11%
- 12-14%
- 15-19%
- 20% or over
- Miscellaneous
- Don’t know

A similar percentage (12.2%) estimated the inflation rate to be between 10% and 11%. Additionally, 7.7% of respondents believed inflation was between 12% and 14%, while 4.3% estimated it to be between 15% and 19%. Smaller percentages believed inflation was lower: 3.5% chose 8-9%, 3.3% selected 0-5%, and 1.7% estimated 6-7%. Finally, 0.3% of responses were classified as “miscellaneous.”

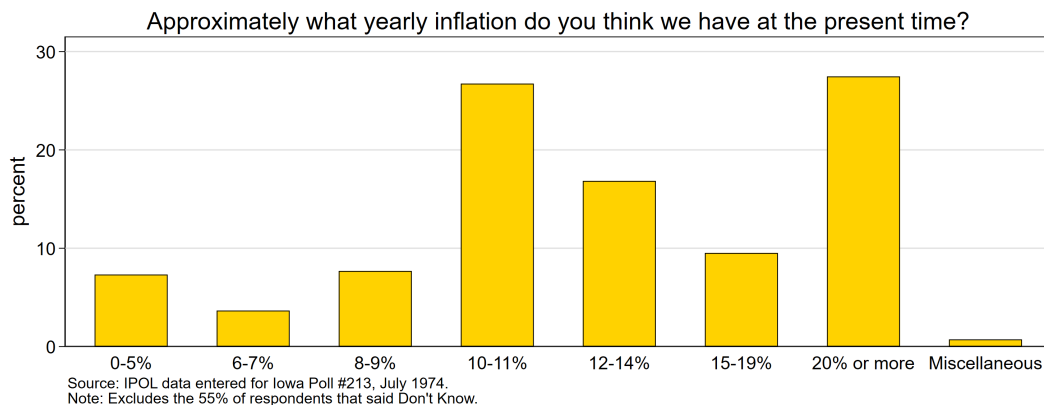

Figure 3.3: Estimated Inflation Rate

The next question asked respondents whether they felt their wages had kept pace with inflation. The survey was conducted in July 1974, following a period of rising inflation, with five consecutive months of rates at or above 10%. This marked the beginning of a prolonged decline in real wages and purchasing power.

29: Do you believe your wages and salaries have kept pace with inflation in the past 12 months?

- *Yes*
- *No*
- *Don't know*

A significant majority (68.2%) of respondents indicated that their wages had not kept pace with inflation. In contrast, 25.8% of participants believed their wages had kept up, while 6.0% responded that they did not know.

The next two questions explored who Iowans believed was responsible for inflation and why they felt that way. For these question respondents were able to offer more than one response. We therefore report our results for each option as a percentage of all responses given. The most common response was "Government, Nixon," selected by 27.4% of respondents. The second most common answer was "People, everyone," chosen by 25.2%. Additionally, 18.5% of respondents said they did not know who to blame.

31: Who do you think is to blame for inflation?

- *People, everyone*
- *Labor, unions*
- *Big business*
- *Government, Nixon*
- *Farmers*
- *Oil companies*
- *Miscellaneous*
- *Indefinite, don't know*

Farmers received the least blame, with only 0.6% of respondents selecting this option. Oil companies were blamed by just 1.2% of respondents.

30: Why do you feel this way?

- *No control of prices and profits of business*
- *Too much government control in general*
- *Unwise use of money by government, spending too much*
- *World conditions*
- *People buy anything, everything they want, greed, too easy to get*
- *Too much union power, high wages*
- *Poor government, politics in general, government deals, the president*
- *Price-wage chain reaction*
- *Don't know, indefinite*
- *Shortages (created or otherwise) cause higher prices*
- *No government control over prices/wages*
- *Miscellaneous*

Further analysis examined how these responses varied by education level. Those with a college education were more likely to blame "people, everyone," with 32.3% choosing this response

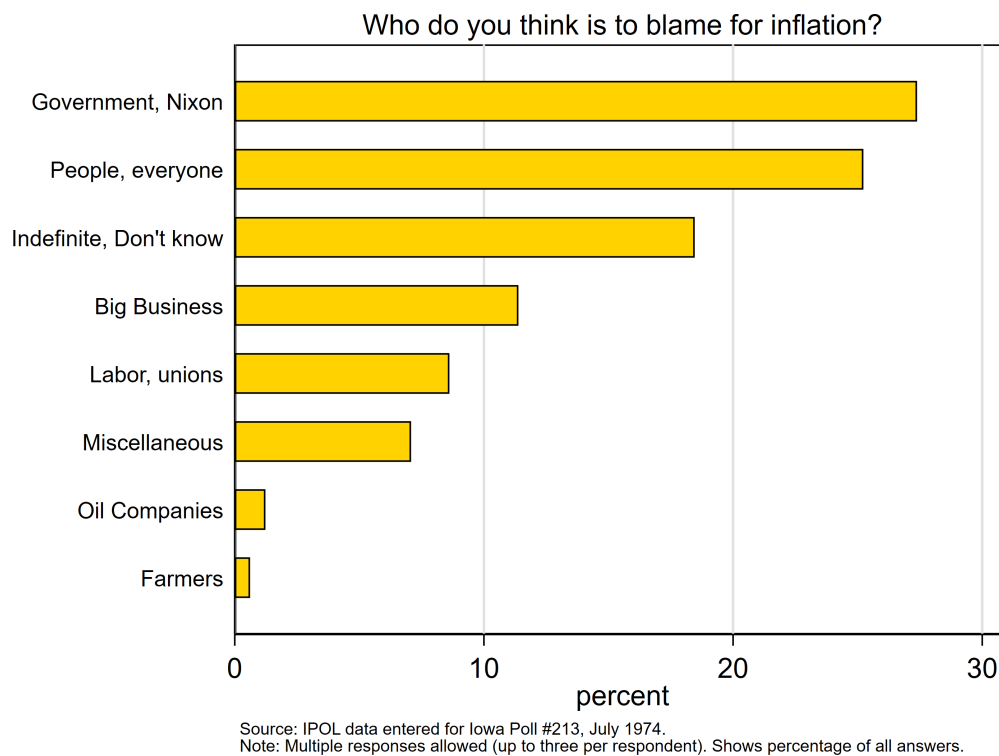

Figure 3.4: Who is to Blame for Inflation

compared to 25.6% of high school graduates and 22.1% of those with less than a high school education. Conversely, respondents with a high school education were the most likely to blame the government and Nixon (28.4%), whereas college-educated respondents were the least likely to do so (21.7%).

Those with a college education were also the most likely to blame big business (12.2%) and labor unions (11.6%). Respondents with lower levels of education were more likely to say they did not know who to blame, with 29.1% of those with less than a high school education selecting this response, compared to 21.2% of high school graduates and 14.3% of college-educated individuals.

Oil companies and farmers were blamed by only a small percentage of respondents across all education levels. Overall, the data suggest that those with higher education levels were less likely to blame Nixon and the government but more likely to blame big businesses and labor unions. Meanwhile, those with less than a high school education were more likely to say they did not know who to blame.

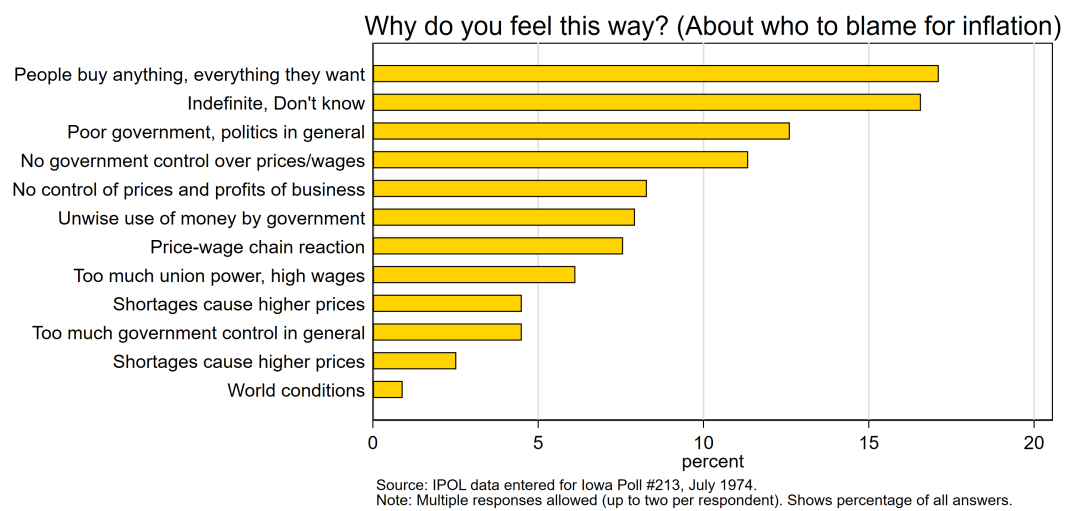

Figure 3.5: Why do You Feel this Way?

3.4 Health Care

This section of the 1974 Iowa Poll asked respondents which form of federal health care they would support. The question provides three possible forms of federal health care, and a “no opinion” option.

36. *If the United States were to adopt one of the following forms of federal health care programs, which one would you favor?*

- *Basically free health care for everyone*
- *Health care for low income, private insurance for others*
- *Health care for catastrophic illness only*
- *No opinion*

Figure 3.6 shows the percentage of respondents who selected each answer. A plurality of respondents (42.4%) supported free health care for low-income people and private insurance for others. Nearly half of respondents supported either universal free healthcare or free healthcare for serious illness only, with roughly equal shares of respondents picking each option (24.5% and 24.7% respectively).

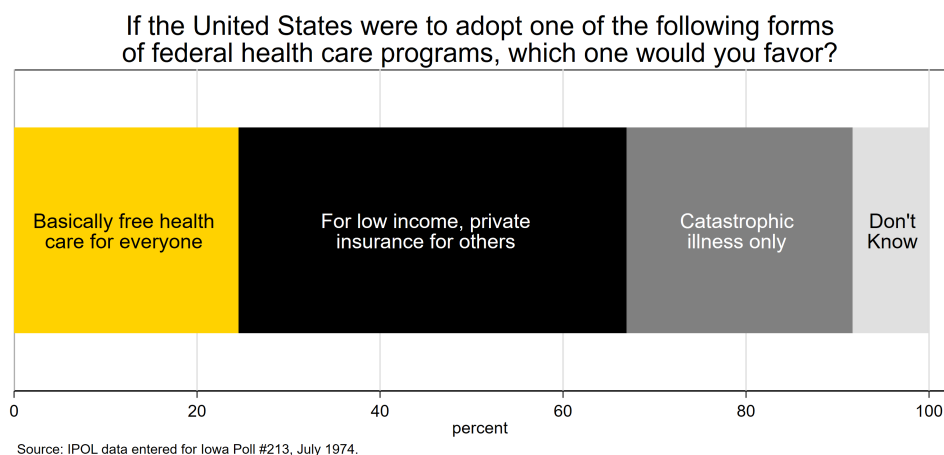

Figure 3.6: Preferences for Federal Health Care Programs

Respondents' answers varied across different age groups, as shown in Figure 3.7. Respondents aged 18-29 were the least likely to support health care for low-income persons only of any surveyed age group, with 30.7% of them selecting “Health care for low income, private insurance for others” compared to 59.7% of respondents aged 65 or older. Older respondents were also increasingly less likely to support universal free healthcare or free healthcare for serious illnesses only: “Basically free healthcare for everyone” and “Healthcare for catastrophic illness only” were picked by 15.3% and 14.52% of respondents aged 65 or older, respectively, while support amongst respondents aged 18-29 for each option was 35.48% and 29.84%, respectively. Interestingly, this trend of increasing support for free low-income healthcare and decreasing support for universal and restricted free healthcare amongst older respondents holds for the intermediary age categories (respondents aged 30-49 and respondents aged 50-64) too; the older a respondent was, the more likely they were to support the mixed position and less likely they were to support an extensive or restrictive approach.

Responses also varied depending on the respondent's education level. Although the preference for health care for low-income individuals and private insurance for others was the most popular option across all education levels, the percentage of respondents favoring this approach declined as education level increased. Among respondents with less than a high school education, basically free health care was favored over catastrophic illness-only coverage by 9.31%. However, among those

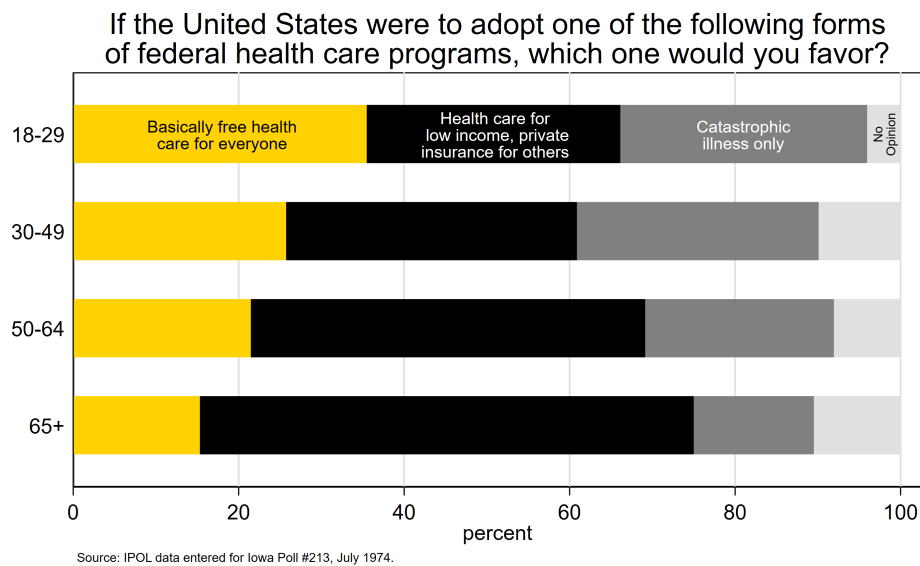

Figure 3.7: Preferences for Federal Health Care Programs by Age

with a high school diploma, the preference shifted, with catastrophic illness-only coverage leading by 6.83%. Among college-educated respondents, the preference flipped again, with basically free health care being favored over catastrophic coverage by 6.39%. The percentage of respondents with no opinion was highest among those with less than a high school education.

3.5 Aid to Less Developed Countries

This section of the 1974 Iowa Poll survey asked respondents how important it was for the United States to provide foreign aid to underdeveloped countries. Respondents were asked to gauge the importance of this foreign aid from very important to not important at all.

37. *How important do you feel it is that the United States provide support for programs to help poor people in underdeveloped countries in the world—very important, fairly important, not too important, or not important at all?*

- *Very important*
- *Fairly important*
- *Not too important*
- *Not important at all*
- *No opinion*

Figure 3.8 shows that the most common responses overall were “fairly important” (39.93%) and “very important” (12.86%), with a significant portion of respondents expressing less enthusiasm: 23.52% said the support was “not too important,” and 17.26% said it was “not important at all.”

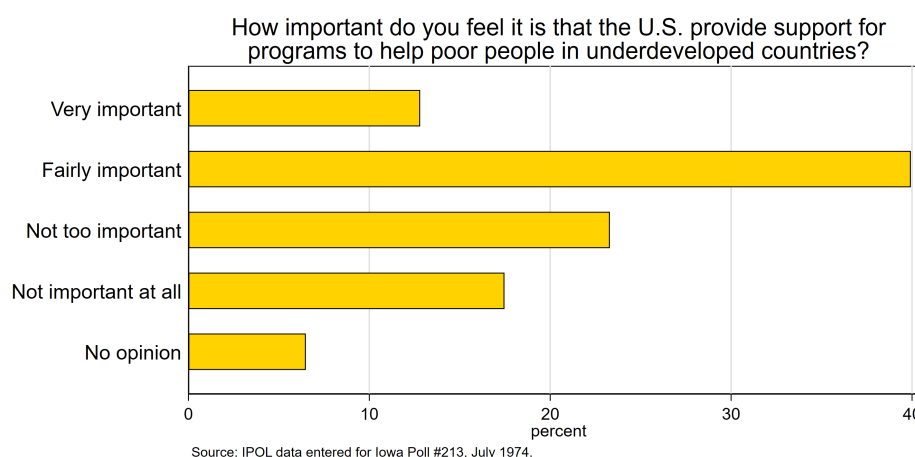

Figure 3.8: Preferences for Aid to Underdeveloped Countries

We chose to cross-tabulate this question with income because financial standing may influence views on foreign aid—whether due to economic self-interest, empathy, or differing ideas about national priorities. The results support this idea: support for aid tended to increase with income. Among those earning \$25,000 or more, 48% said the aid was “fairly important,” compared to only 33.04% of those earning under \$10,000. Meanwhile, opposition was more common among lower-income groups—22.91% of respondents earning under \$10,000 said the aid was “not important at all,” compared to just 12% in the highest income bracket. These trends suggest that economic conditions shaped how Iowans viewed the value of international assistance.

We also cross-tabulated responses with party identification to explore how political values influenced attitudes toward foreign aid. Democrats were more likely than Republicans to say such aid was “very important” (17.13% vs. 11.28%), while Independents were the most likely group to label it “fairly important” (44.92%). Republicans and Democrats showed similar levels of skepticism, with 17.95% and 18.98% respectively saying the aid was “not important at all.” Independents were somewhat more moderate, with 26.74% choosing “not too important” and only 14.97% selecting “not important at all.” While the partisan divide was not stark, these results show that party identification did reflect meaningful variation in the intensity and framing of support for foreign aid programs.

3.6 Presidential and Congressional Approval

A month before Nixon would resign, this Iowa Poll asked respondents about their views on the U.S. Congress and President Nixon. The first question asked whether they approved of the job that Congress was doing, and the second question asked the same about Nixon. We explore questions specifically related to Watergate and impeachment in the next Chapter. Here we report results for questions regarding Nixon and Congress' overall job approval rating.

33. Do you approve or disapprove of the way the U.S. Congress is handling its job in Washington?

- Approve
- Disapprove
- No opinion

34. Do you approve or disapprove of the way Nixon is handling his job as President?

- Approve
- Disapprove
- No opinion

Despite the controversy, when looking at President Nixon's Job approval rate by party identification, he still maintained strong partisan support of Republican Iowans at 63.4% and a disapproval rate of only 25.8%. In comparison, with a democrat majority in Congress, about 49.6% of Iowan Republicans disapproved of Congress's job performance, while 35.6% approved. Iowan Democrats strongly disapproved of the job Nixon was doing at the time. In contrast, only 24.8% of Iowa Democrats approved of the job Nixon was doing, and a substantial amount of 67.8% disapproved of the job Nixon was doing. When looking at Iowa Democrats' opinions of Congress's job performance, 37.2% approved and 43.3% disapproved of Congress' job performance. Independent voters in Iowa mostly disapproved of Nixon and Congress's job performance.

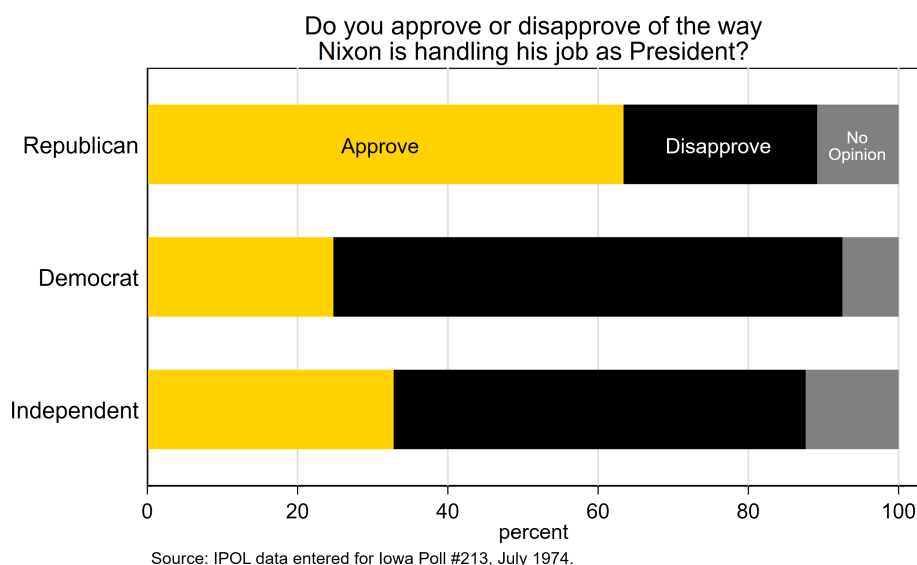

Figure 3.9: Nixon Approval by Party Identification

Strong partisan divides also emerge regarding Congress. Although Democrats were the majority party in Congress, Republicans and Democrats disapproved of Congress's job. Independents, on

the other hand, showed roughly similar levels of disapproval of both the job President Nixon and Congress was doing at the time. Overall, it reflects the broad dissatisfaction of Iowans with politics and the hostile political climate in the mid-1970s.

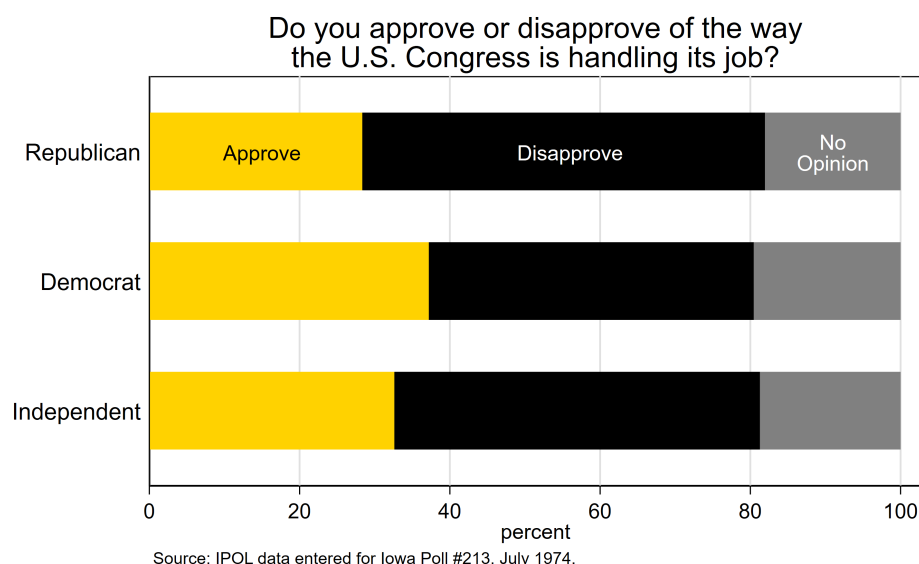

Figure 3.10: Congressional Approval

Differences also emerged based on respondent sex. A majority of men, 53.9%, disapproved of Congress's performance, compared to 43.2% of women. Approval remained low across both groups, with 31.6% of men and 34.1% of women expressing approval. Women were more likely to select "no opinion," at 22.7%, compared to 14.5% of men, indicating a difference in engagement or certainty. While disapproval was common, men appeared more decisive in their opinions, whereas women were slightly more approving or uncertain. These results reflect the broader climate of declining confidence in government institutions during the mid-1970s.

While overall a majority disapproved of Nixon's performance, a breakdown of the approval ratings by occupation of the chief wage earner explores some more distributed results. Despite similar career standings, professionals and managers have polar opposite majority results. While managers had an approval rating of 51%, professionals only had an approval rating of 35.1%. The professionals' majority opinion lay in their disapproval rating which stood at 58.1%, whereas the managers only had 47.1%.

3.7 Presidential Nominations for the 1976 Election

In this section we analyze some of the questions focusing on Iowans' opinions about the 1976 Presidential race. We examined Iowan's views on which political figures they would like to see nominated by each party in the 1976 presidential election.

3.7.1 Republican Nomination

The survey asked respondents who they would like to see the Republican and Democratic Party nominate for the 1976 presidential election. Respondents were asked to select a possible nominee from the provided list.

39. Here is a list of Republicans who have been mentioned as possible nominees for

President in 1976. As of today, which ONE would you like to see the Republicans nominate in 1976?

- *Howard Baker*
- *John Connally*
- *Gerald Ford*
- *Charles Percy*
- *Ronald Reagan*
- *Nelson Rockefeller*
- *Other*
- *Don't know*

were asked to select a possible nominee from the provided list.

39. Here is a list of Democrats who have been mentioned as possible nominees for President in 1976. As of today, which ONE would you like to see the Democrats nominate in 1976?

- *Henry Jackson*
- *Edward Kennedy*
- *George McGovern*
- *Walter Mondale*
- *Edmund Muske*
- *Adlai Stevenson*
- *George Wallace*
- *Other*
- *Don't know*

Both party nominees were compared to two different demographic information to better understand what voters are interested in and where they come from.

Candidate Overview

Figure 3.11 shows the percentage of respondents who selected each Republican candidate. The most popular choice was the then-vice president Gerald Ford, with 22.8% of respondents wishing to see him nominated. Ronald Reagan, who was governor of California at the time, trailed by just one percentage point as the second most popular selection at 21.8%. 15.5% of respondents picked Charles Percy as their preferred Republican nominee, making him the only other potential nominee to receive double-digit support. Out of the candidates available Howard Baker was the least preferred candidate with 4.6%.

Figure 3.12 shows the percentage of respondents who selected each Democratic candidate. Edward Kennedy led with 31.3% of the support, followed by George Wallace at 19.2%, Edmund Muskie at 8.8%, and Henry Jackson at 8.0%. Other candidates, including George McGovern (5.5%), Walter Mondale (5.8%), and Adlai Stevenson (3.5%), received lower levels of support. Notably, 16.8% of respondents reported that they were unsure about their choice.

Annual Family Income

Opinions of Republican nominees varied with annual family income. Of the possible nominees, Gerald Ford received the most support from respondents with an annual family income of less than \$10,000, with 24.23% selecting him and 20.7% picking Reagan. Reagan in turn did best with respondents making more than \$25,000, with 24% of them choosing him compared to 18.67% selecting Ford. Respondents with an annual family income of less than \$10,000 or more than \$25,000 were most likely to be undecided, with 19.8% and 24% of each income group respectively selecting "Don't know".

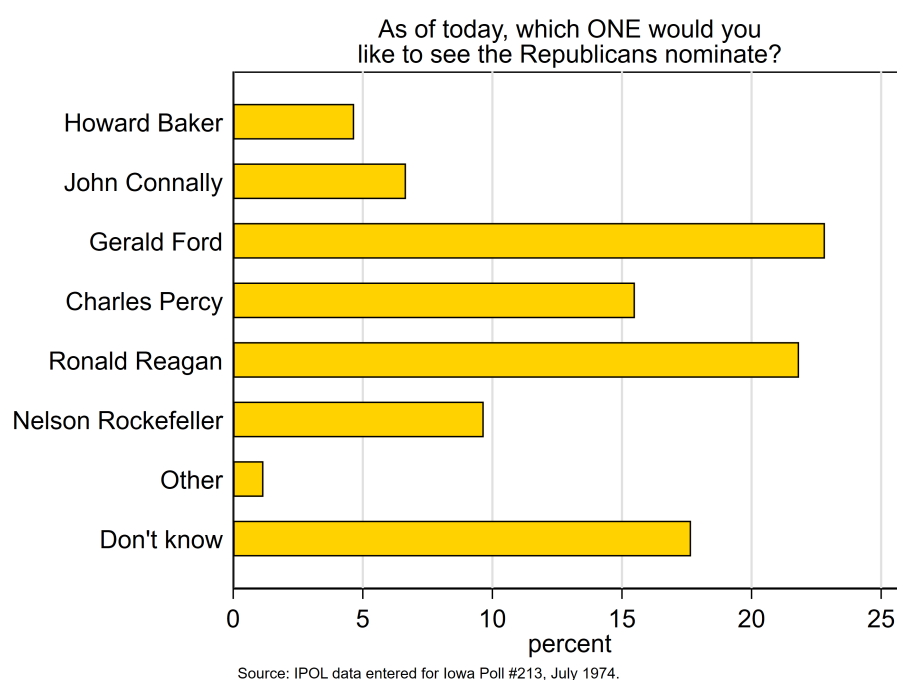

Figure 3.11: Republican Nomination

Similar results obtained for the Democratic nominees. Edward Kennedy was the preferred choice across most income brackets, except for those earning over \$25,000, where George Wallace led. Kennedy's strongest support came from lower-income groups, with 40.15% of those earning under \$10,000 preferring him. Wallace gained more traction among higher-income respondents, with 26.83% of those making over \$25,000 choosing him. Edmund Muskie ranked third in preference across most income brackets, except for the \$10,000-\$15,000 range. Preferences among the other candidates were modest, with none of the other four reaching double-digit support in any income bracket. And Adlai Stevenson and Walter Mondale had the least amount of support throughout all income classes.

Education

Among respondents with less than a high school education, Gerald Ford tied with Ronald Reagan, each receiving 19.7% of support. However, Ford narrowly out ranked Reagan among those with a high school diploma or some college experience, earning 24.8% of their support versus Reagan's 22.9%. Among college-educated respondents, Percy leapfrogged over both Reagan and Ford, earning 22.7% of support, whereas Reagan's and Ford's support dropped to within 20%.

Among respondents with less than a high school education, George Wallace held a slight lead over Edward Kennedy, receiving 25.5% support compared to Kennedy's 24.4%. However, Kennedy was the clear favorite among those with a high school diploma or some college experience, earning 37.2% of their support, while Wallace's backing declined to 20.5%. Among college-educated respondents, Kennedy remained the top choice at 24.8%, whereas Wallace's support dropped further to 13.7%. With less than high school education nearly 30% of respondents said they "Don't know", 15.2% of high school education also responded, "Don't know" as well as 14.2% of college educated respondents.

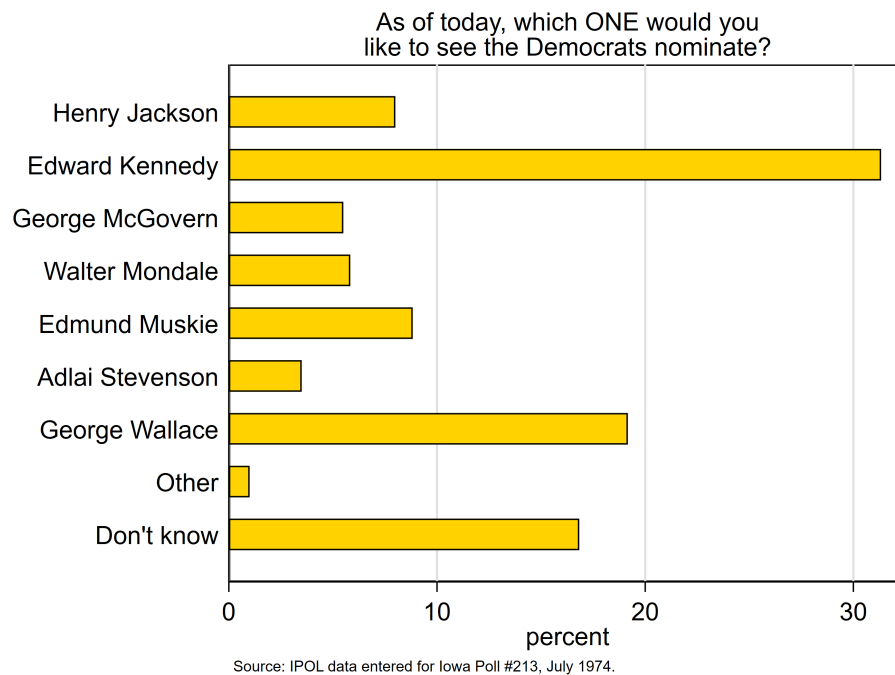

Figure 3.12: Democratic Nomination

3.7.2 Hypothetical Presidential Election Matchups

This section of the 1974 Iowa Poll Survey asked respondents who out of a given pairing of candidates they would vote for if the presidential election were held today. Respondents were presented with twelve matchups, each between a possible Republican and Democratic presidential nominee, and asked to select which they would vote for.

41. Suppose the election for President were TODAY and the following candidates were running. Whom would you vote for? (READ EACH COMBINATION)

	Republican	Democrat
41a.	Gerald Ford	Edward Kennedy
41b.	Ronald Reagan	Edward Kennedy
41c.	Charles Percy	Edward Kennedy
41d.	Nelson Rockefeller	Edward Kennedy
41e.	Gerald Ford	Henry Jackson
41f.	Ronald Reagan	Henry Jackson
41g.	Charles Percy	Henry Jackson
41h.	Nelson Rockefeller	Henry Jackson
41i.	Gerald Ford	George Wallace
41j.	Ronald Reagan	George Wallace
41k.	Charles Percy	George Wallace
41l.	Nelson Rockefeller	George Wallace

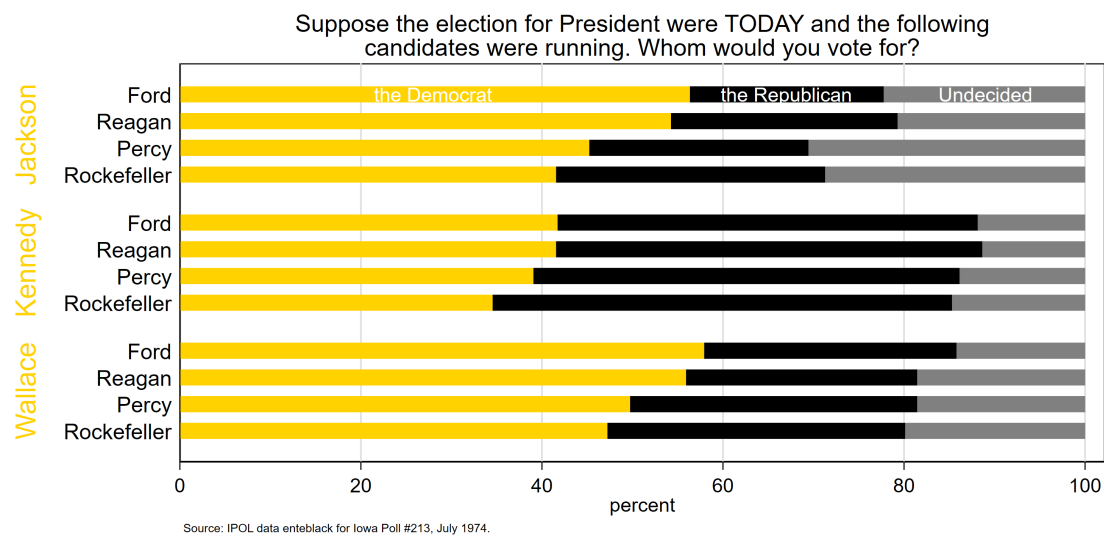

Figure 3.13: Hypothetical Head-to-Head Presidential Match-ups

4. Watergate

4.1 Overview

In this chapter, we analyze a series of questions regarding the Watergate scandal and President Nixon. We start with opinions on whether Nixon should resign and then to more detailed questions about respondents' awareness and opinion about the transcripts of President Nixon's conversations. We follow with perceptions of fairness of media coverage of the impeachment inquiry and end with opinions about the political effects of impeachment on Nixon's ability to handle various national and international issues.

4.2 Impeachment and Resignation

The first two questions asked whether Nixon should be impeached and whether he should resign from office.

6. Do you think President Nixon should or should not be impeached by the U.S. House of Representatives, which would require him to stand trial before the U.S. Senate?

- *Yes, impeach and require trial*
- *No, not impeach*
- *No opinion*

8. Do you think President Nixon should or should not resign from office?

- *Should resign*
- *Should not resign*
- *No opinion*

When asked whether Nixon should resign or whether he should be impeached, respondents were 11% more likely to say he should be impeached than to say he should resign. The split between those who said he should resign/should not resign was 40% apart, compared to just 12% between those who said he should be impeached and those who said he shouldn't. 48% of respondents said

that Nixon should not be impeached, compared to 65% who said he should not resign, indicating that respondents were more evenly divided on impeachment than on resignation.

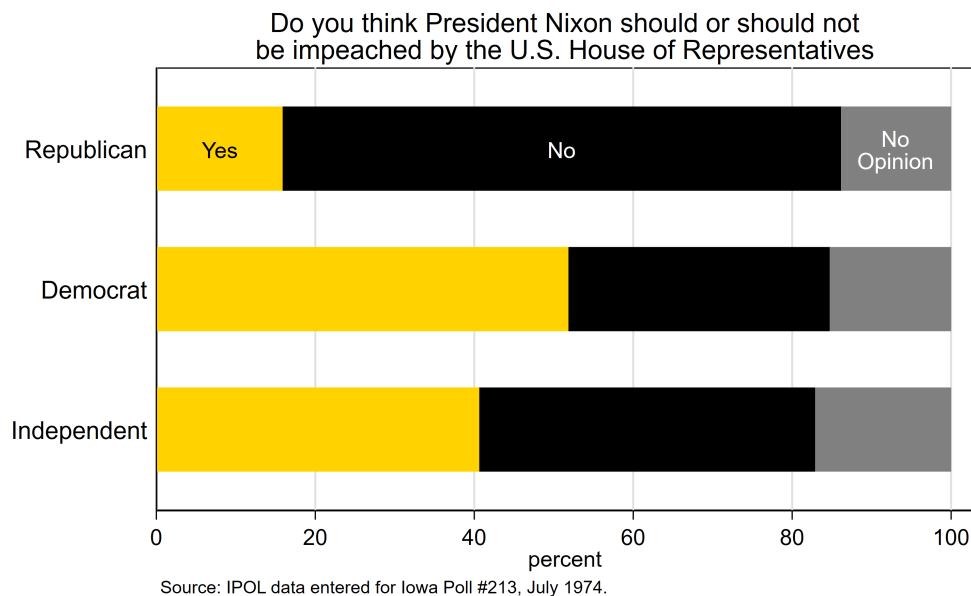

Figure 4.1: Should President Nixon be Impeached

When we analyzed these questions by age, 18 and 29 were more likely to support both resignation and impeachment than any other age group. For both questions, positive responses to resignation and impeachment declined as respondents' ages increased, though the opposite wasn't seen for negative responses. There was a 14% difference between the youngest and oldest age range in positive responses to the resignation question, compared to a 26% difference when asked about impeachment. In contrast, those aged 50-64 were most likely to say Nixon shouldn't resign at 69%, and those 65+ were most likely to say he shouldn't be impeached at 62%.

4.3 Transcripts Awareness

The next question asked respondents whether they had read or heard any of the Watergate transcripts, and if they had, what their source was and how much they had read or heard. Finally, respondents were asked about where they got information about the impeachment inquiry, and which of those sources they felt were the most trustworthy.

9. Did you read or hear any of President Nixon's edited transcripts of conversations related to Watergate?

- *Yes*
- *No*

Respondents that answered "Yes" were asked two follow-ups.

9a. Where did you read or hear the transcripts – radio, newspapers, television, magazines, books or somewhere else?

- *Radio*
- *Newspapers*

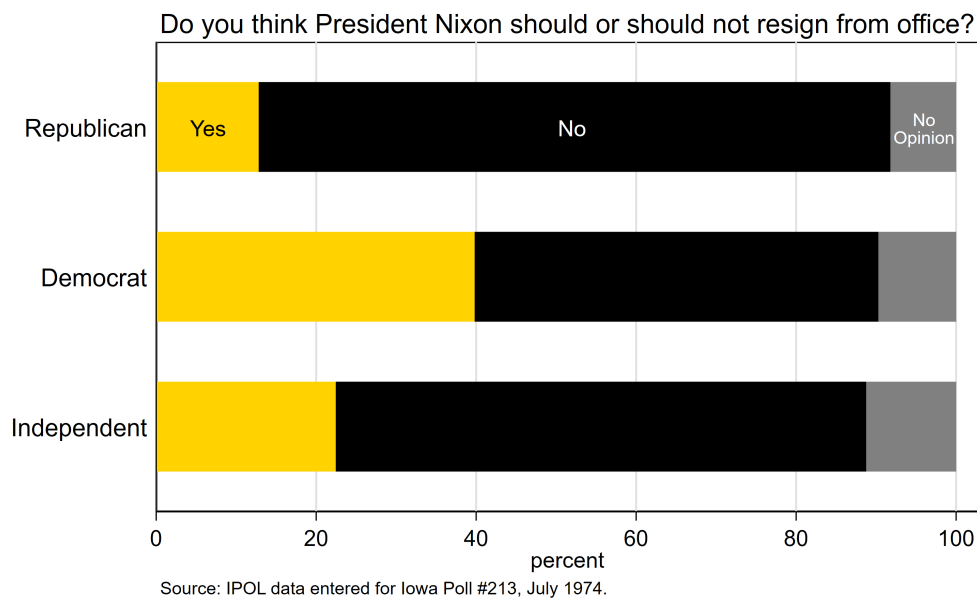

Figure 4.2: Should President Nixon Resign

- *Television*
- *Magazines*
- *Books*
- *Other*

9b. About how much of the transcripts did you read or listen to— almost all, some but not a lot, or very little?

- *Almost all*
- *Some but not a lot*
- *Very little*
- *Don't recall*

We found that most Iowans had read or heard some, but not all the Nixon transcripts. 54% of total respondents reported having read or heard some, but not a lot, of the transcripts. 22.6% of those aged 50-64 said that they had read or heard almost all of the transcripts, which was 6% more than the second likeliest group to choose this option (respondents aged 65+). Overall, those aged 30-49 were most likely to have read or heard at least some, if not all of the transcripts: combined, a total of about 77% of respondents in this age group chose one of those two options, the highest of any age group.

When analyzing responses to the questions about where respondents got news about the impeachment and whether Nixon should resign, we found a relatively even split between opinion on the President's resignation across all media types; around 12.5% of respondents were radio listeners who thought he should resign, and same for those who said he shouldn't, which had a similar split to TV listeners, at 53.3% and 52.1% respectively. Those who read newspapers are somewhat more likely to think he shouldn't resign, at 29.2% over 26.3%, but the category also had a relatively higher proportion of respondents who had no opinion than other types of media, with 33.3%.

When we compared responses with level of education, we found that 48.8% of respondents with less than a high school education had read or heard the Watergate transcripts, while 56%

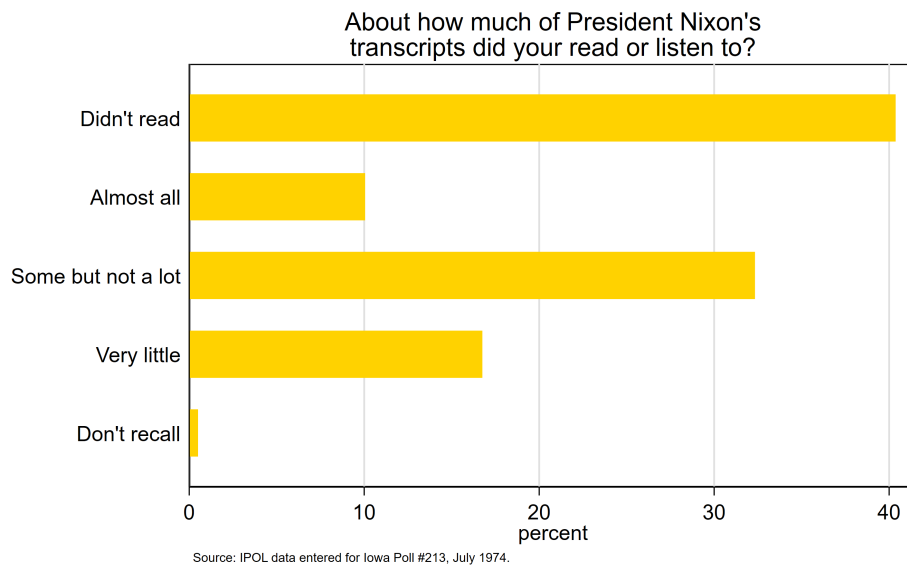

Figure 4.3: Respondents' Attention to President Nixon's Transcripts

of those who had graduated from high school, trade, or business school had done so. 70.4% of those who had attended at least one year of college had read or heard the transcripts, over a 14% jump from high school, trade, and business school graduates. Overall, the data shows that higher educational attainment coincided with increases in awareness of the Watergate transcripts.

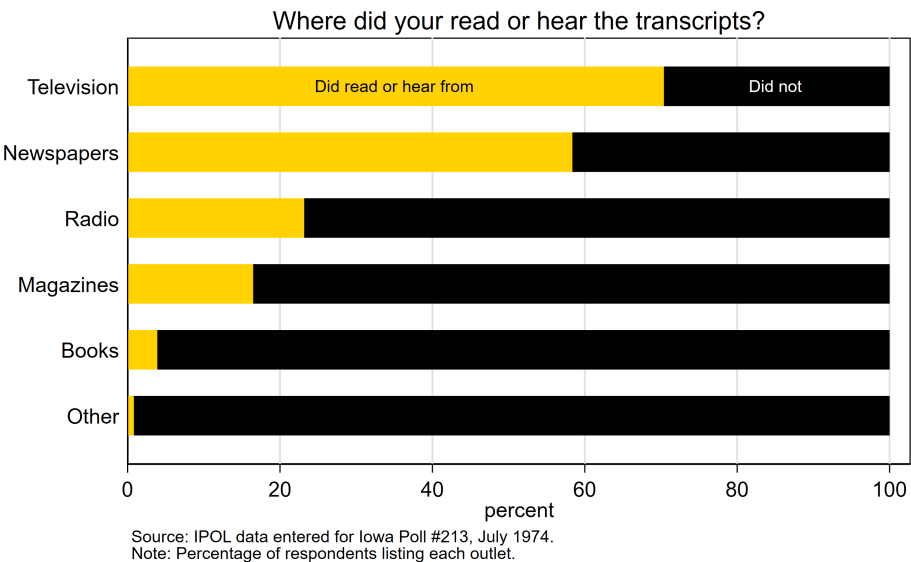

Figure 4.4: Where Respondents Heard or Read about President Nixon’s Transcripts

4.4 Transcripts and News Coverage

These questions gauged respondents' thoughts on whether specific forms of media were fair in the reporting of the President's transcripts, as well as thoughts on impeachment proceedings being covered on live television. The first question asks respondents whether they feel television had been fair or unfair in reporting the contents of the President's transcripts, while the second question asks the same of newspapers. The third question asks respondents whether they would favor or oppose live television coverage, should it be held in the U.S. House of Representatives.

12. In general, do you feel television has been fair or unfair in reporting the contents of the President's transcripts?

- *Fair*
- *Unfair*
- *No opinion*

13. In general, do you feel newspapers have been fair or unfair in reporting the contents of the President's transcripts?

- *Fair*
- *Unfair*
- *No opinion*

14. If impeachment proceedings are held in the U.S House of Representatives, would you favor or oppose live television coverage of these proceedings?

- *Favor*
- *Oppose*
- *No opinion*

In response to the first question, the majority of respondents (51.5%) indicated that they thought television had been fair in reporting the contents of the President's transcripts, followed by those who viewed it as unfair (29.0%), and those who had no opinion (19.5%). Interestingly, Democrats were over twice as likely to indicate that they viewed television as fair in reporting the transcript content (68.1%) compared to Republicans (32.8%). However, sex seemed to have had no significant correlation with the likelihood of signifying the television to have been fair in reporting the transcript content, with 50.4% of men and 52.5% of women indicating it to be so.

In response to the second question, the majority of respondents (53.1%) answered that they thought newspapers had been fair in reporting the contents of the President's transcript. This was followed by those who indicated the newspaper coverage to be unfair (25.9%) and those who had no opinion (21.0%). In a similar pattern to perceived fairness of television coverage, almost twice as many Democrats (68.3%) found the newspapers to be fair in reporting the transcript content, as opposed to Republicans (35.2%). In comparison to results on the fairness of television coverage, sex seems to be similarly insignificant in whether or not respondents viewed the newspaper as fair in reporting transcript coverage, with 57.1% of men and 55.2% of women reporting they believed it was fair.

In response to the third question, 55.4% of respondents indicated that they would favor live television coverage of impeachment proceedings, 36.4% indicated that they would oppose it, and 8.2% had no opinion. Significantly more of those who favored live coverage of the impeachment identified as Democrats (66.7%) than as Republicans (40.4%), aligning with what seems to be a pattern observed in this topic. Notably, age also seemed to be an indicator of whether respondents favored or opposed live coverage of the impeachment proceedings. The vast majority of those aged 18-29 favored live coverage (71.9%), followed by a more even split in those aged 30-49 (50.0%).

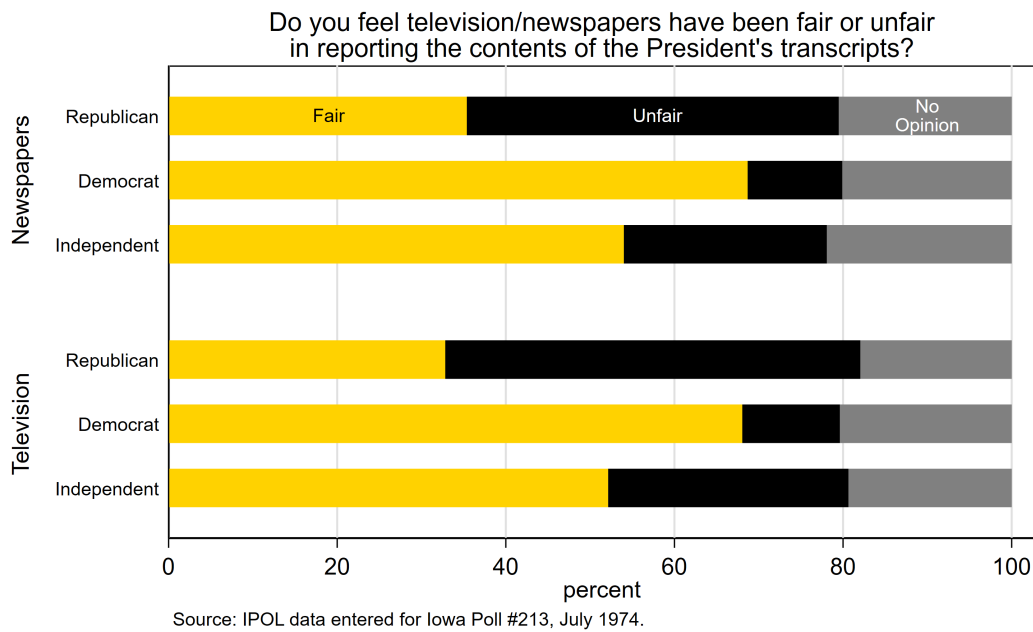

Figure 4.5: Have television/newspapers been fair or unfair in reporting the contents of the President's transcripts

The age group of 50-64 was more favorable towards the coverage (66.2%), though the lowest favorability is shown by those aged 65 and above (38.1%).

17. Which of the following do you feel you can trust the most regarding the accuracy of news and information about the presidential impeachment inquiry?

- *Radio*
- *Newspapers*
- *Television*
- *Magazines*
- *None*
- *Don't know*

4.5 Impeachment News Coverage

This section of the survey explores what forms of media respondents consume in consideration of the presidential impeachment inquiry, as well as what form of media they regard as the most trustworthy. The first question asks respondents where they receive most of their news on the presidential impeachment inquiry, ranging from the radio, newspapers, television, magazines, or other. In the second question, these same types of media are used to ask respondents which they feel they can trust the most regarding the accuracy of news and information on the presidential impeachment inquiry.

17. Where do you feel you receive most of your news and information about the presidential impeachment inquiry—from radio, newspapers, television, or magazines?

- *Radio*
- *Newspapers*
- *Television*
- *Magazines*
- *Other*
- *Don't know*

17. Which of the following do you feel you can trust the most regarding the accuracy of news and information about the presidential impeachment inquiry?

- *Radio*
- *Newspapers*
- *Television*
- *Magazines*
- *None*
- *Don't know*

In response to the first question, the majority of respondents (52.0%) indicated that they received most of their information on the presidential impeachment inquiry from television. This was followed by newspapers (28.9%) and radio (12.4%), with all other responses being selected by less than 3% of respondents. When analyzing responses by sex, women seemed to have utilized television more frequently (59.7%), compared to men (43.5%), to gain information on the presidential impeachment inquiry. Though men also reported using television most frequently in this case, substantially more men utilized newspapers (37.1%) as opposed to women (21.4%).

In response to the second question, television was selected most often (41.9%) as being the most trustworthy. Next was newspapers with 23.0%, followed by “Don’t know” (11.19%), “None” (10.2%), radio (7.7%), and magazines (6.0%). Interestingly, responses seemed to be detached from party identification, with 42.1% of Republicans and 45.6% of Democrats indicating television to be the most trustworthy. This agreement contrasts party identification and trends in the trustworthiness of the President’s transcript coverage analyzed in “Transcripts Coverage”.

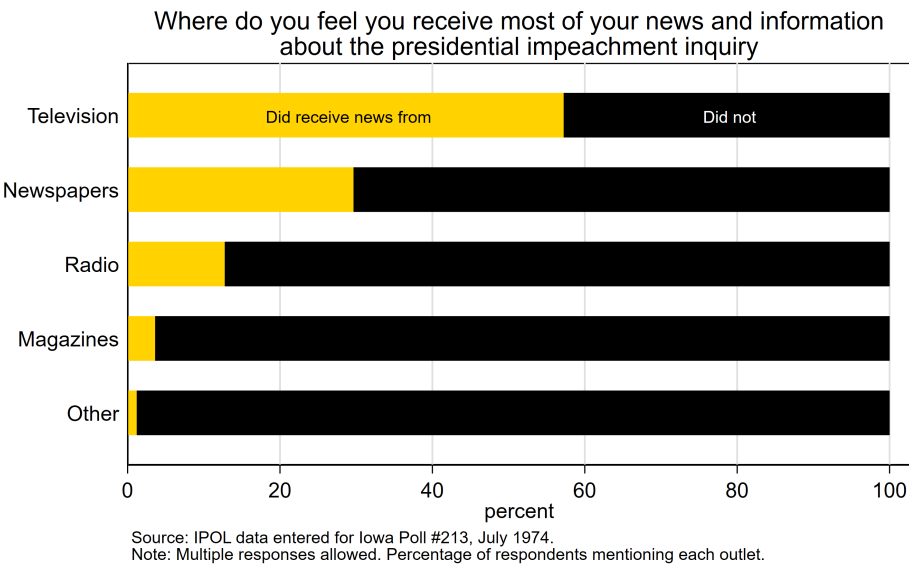

Figure 4.6: Where do you feel you receive most of your news and information about the presidential impeachment inquiry

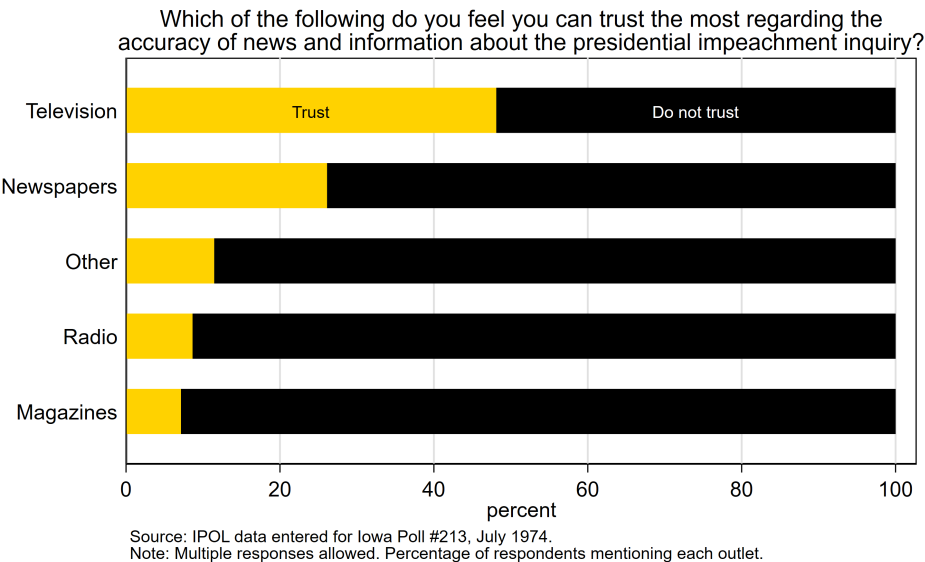

Figure 4.7: Which do you think you can trust regarding the accuracy of news and information about the presidential impeachment inquiry

4.6 Impeachment Impacts

This section examines questions exploring Iowans' views on the impacts of the impeachment on President Nixon's ability to handle a range of issues, including inflation, the energy shortage, dealing with Congress, arms limitation talks with Russia, Middle East negotiations, and relationships with European nations.

15. Do you think impeachment proceedings will or will not have a serious impact on the President's ability to handle the following:

- 15a. Inflationary trend in cost of living*
- 15b. Energy shortage*
- 15c. Dealing with Congress*
- 15d. Russian/U.S. arms limitation talks*
- 15e. Middle East negotiations*
- 15f. Dealing with European nations*

- *Serious Impact*
- *Not Serious*
- *No Opinion*

Regarding the impact of impeachment proceedings on the inflationary trend in the cost of living, the most popular response was "Not Serious," with 46.7% of respondents selecting this response. The next most popular response was a close second, with 45.5% believing that the impeachment proceedings would have a serious impact. Finally, 7.9% said they had no opinion. A majority of respondents (59.5%) believed the impeachment proceedings would not seriously impact the President's ability to handle the energy shortage. One-third (33.2%) believed it would have a serious impact, while 7.3% expressed no opinion.

Respondents were most likely to believe that impeachment proceedings would seriously impact the President's ability to deal with Congress. 70.5% of respondents selected "Serious Impact," making it the highest among the issue areas surveyed. Only 22.2% believed it would not have a serious impact, and 7.4% had no opinion. Public opinion was more evenly divided on the issue of impeachment's effect on Russian/U.S. arms limitation talks. About 46.0% of respondents believed there would be a serious impact, while 41.9% thought it would not be serious. A smaller portion, 12.0%, said they had no opinion.

Another question explored the impacts of impeachment on the President's ability to handle Middle East negotiations. The most common response was "Serious Impact," selected by 46.3% of respondents. The second most common answer was "Not Serious," chosen by 42.8%. Additionally, 10.8% of respondents said they did not have an opinion on the matter. Regarding the perceived impact of impeachment on relations with European nations, the most common response was "Serious Impact," selected by 45.4% of respondents. The second most common answer was "Not Serious," chosen by 42.7%. Additionally, 11.9% of respondents said they did not have an opinion.

Further analysis examined the impact of impeachment proceedings on inflation based on respondents' education levels. Those with high school or other levels of education were more likely to say that inflation will be seriously impacted, with 49.2% of respondents agreeing. Respondents with no high school experience or some college experience were more likely to say that impeachment proceedings would not have a serious impact on inflation. 47.6% of those with high school experience and 48.7% of those with some college experience believed that impeachment proceedings would not have a serious impact on inflation.

Impeachment proceedings were believed to have serious impacts on President Nixon's ability to deal with Congress between Republican, Democratic, and Independent respondents. 65.8% of Republicans, 69.8% of Democrats, and 77.5% of Independents all believed that the impeachment

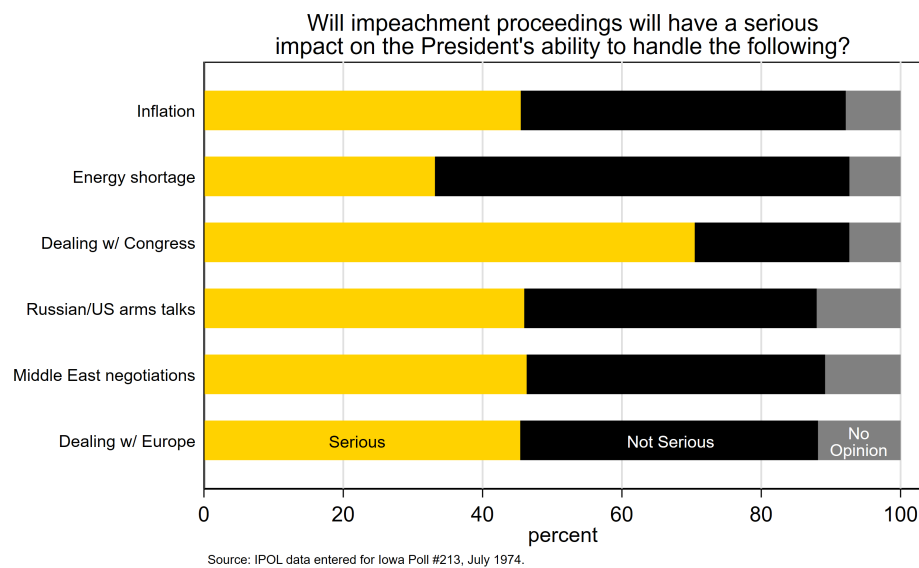

Figure 4.8: Impact of impeachment proceedings on the President's ability to handle the following

proceedings would have a serious impact on Nixon's ability to deal with Congress. 25.9% of Republicans, 22.6% of Democrats, and 16.9% of Independents believed that the proceedings would not have an impact on Nixon's ability to deal with Congress.

4.7 Kissinger

This section examines questions exploring Iowans' opinions on Secretary of State Henry Kissinger. The first question asked whether respondents approved of Kissinger's job and their reasons for approval or disapproval. The second question asked respondents what they thought about Kissinger's statement regarding his resignation if his name was not cleared in the Watergate scandal.

18. Do you approve or disapprove of the way Henry Kissinger is handling his job as Secretary of State?

- *Approve*
- *Disapprove*
- *No opinion*

Respondents were then asked "Why do you feel this way?", with different sets of option offered for those who approved and those who disapproved of how Kissinger was handling his job.

If Approve:

- *Doing a good (wonderful)(magnificent) job*
- *Capable man, honest, good diplomat, best we've had*
- *International relations work, peace agreements, foreign policy, uniting the world*
- *Accomplishing something, getting results*
- *Doing alright, best that he can*
- *Miscellaneous*
- *Don't know, indefinite*

If Disapprove:

- *Don't like the way he acts, personality*
- *He may have done something wrong (latest flareup)*
- *Doesn't accomplish much, not doing a good job*
- *Don't like his agreements, fear he is going something away, too much away*
- *Don't like the government in Washington in general*
- *Miscellaneous*
- *Don't know, indefinite*

19. What was your reaction to Kissinger's statement that he would resign unless his name was cleared in the wire-tapping scandal?

- *Wouldn't want to lose him, bad for the country*
- *Agree with him, clear it up, fight it out, honest reaction, would do the same, don't blame him*
- *Should admit all, he might be guilty, let him resign*
- *Hasty statement, too sensitive, childish outburst, bluffing, not used to criticism, under stress*
- *Could be looking for a way out, wanting out, excuse to leave*
- *Shocked, surprised, didn't like*
- *Miscellaneous*
- *Indefinite, no reaction, hadn't heard about it*

Overall, 81.9% of respondents approved of Kissinger, while 6% disapproved and 12.2% had no opinion. Examining Kissinger's approval in relation to the respondents' party identification, Republicans, Democrats, and Independents all demonstrated strong support for him. Among Republicans, 84.6% approved, 3.1% disapproved, and 12.3% had no opinion. For Democrats, 81.9% approved, 7.4% disapproved, and 10.7% had no opinion. Meanwhile, 79.1% of Independents approved, while 7.5% disapproved, and 13.4% had no opinion about Kissinger. The Secretary of State achieved an overall high approval rating.

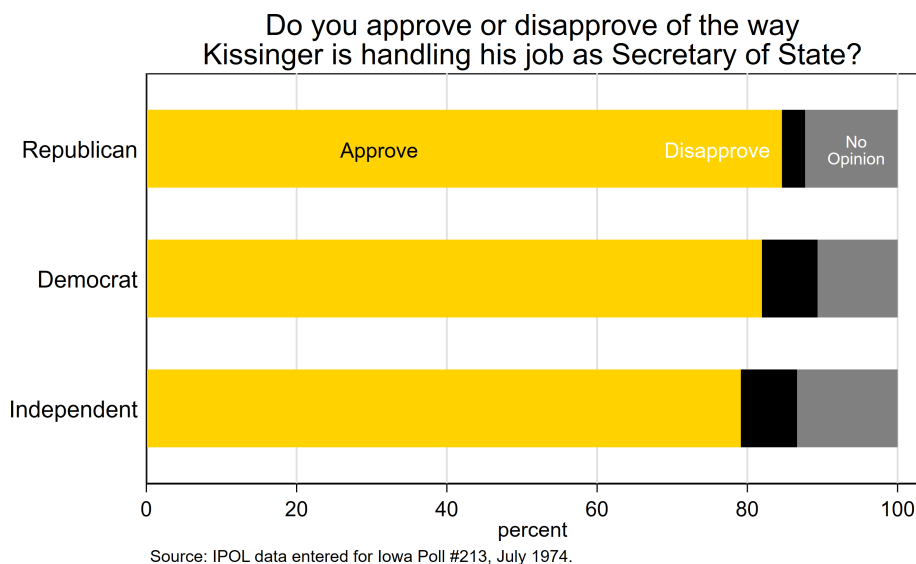

Figure 4.9: Approval of Kissinger's handling of his job as Secretary of State

Respondents who had completed some college were more likely to approve of Kissinger than those who had no high school education. 89.4% of respondents who had completed some college

approved of Kissinger, 5.8% disapproved of Kissinger, and 4.8% had no opinion. For those who had no high school education, 68.6% approved of Kissinger, 9.3% disapproved, and notably, 22.1% had no opinion.

Male respondents were more likely to approve of Kissinger than female respondents were. 84.1% of males approved of Kissinger, 6.4% disapproved, and 9.5% had no opinion. 79.9% of women approved of Kissinger, while 5.7% of women disapproved, and a higher 14.5% of women had no opinion.

Those who approved of Kissinger cited that he was a capable man, an honest and good diplomat, and that he was the best Secretary of State the country has had the most with 22.6% of respondents giving this reason. 21.9% of respondents also approved of his international relations work in obtaining peace treaties and uniting the world. 30.6% of those who did not approve of Kissinger claimed that they did not like the agreements he had made.

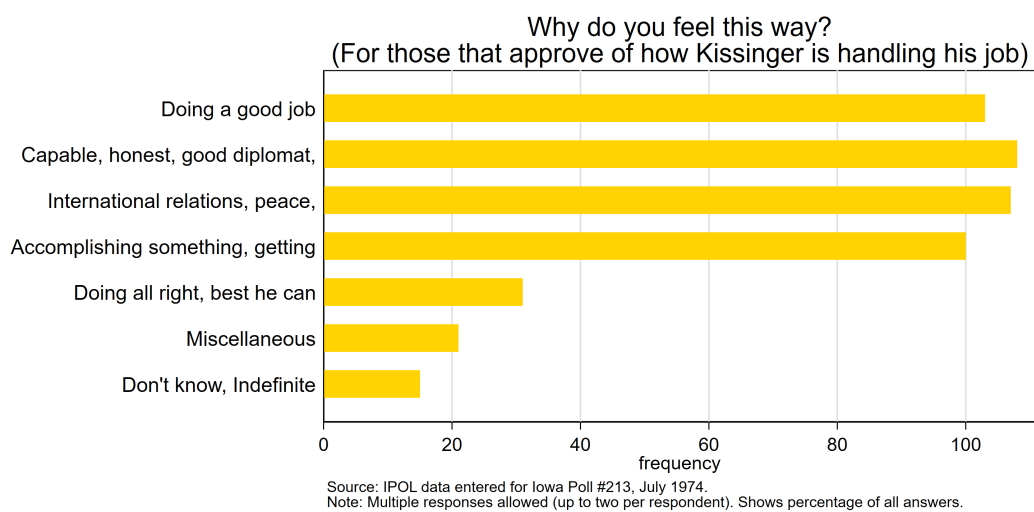

Figure 4.10: Why do you feel this way? (For those that approve of how Kissinger is handling his job)

Regarding Kissinger's statement claiming that he would resign if his name was not cleared from the Watergate investigation, most respondents agreed with him. 37.6% of respondents said that they agree with him and that he should fight it. 18.5% of respondents had either no reaction to his statement or had not heard about it. Many respondents did not like Kissinger's response to the ongoing investigation. 15.7% of respondents believed his statement was hasty, too sensitive, and a childish outburst. Another 8.9% of respondents were surprised and did not like it.

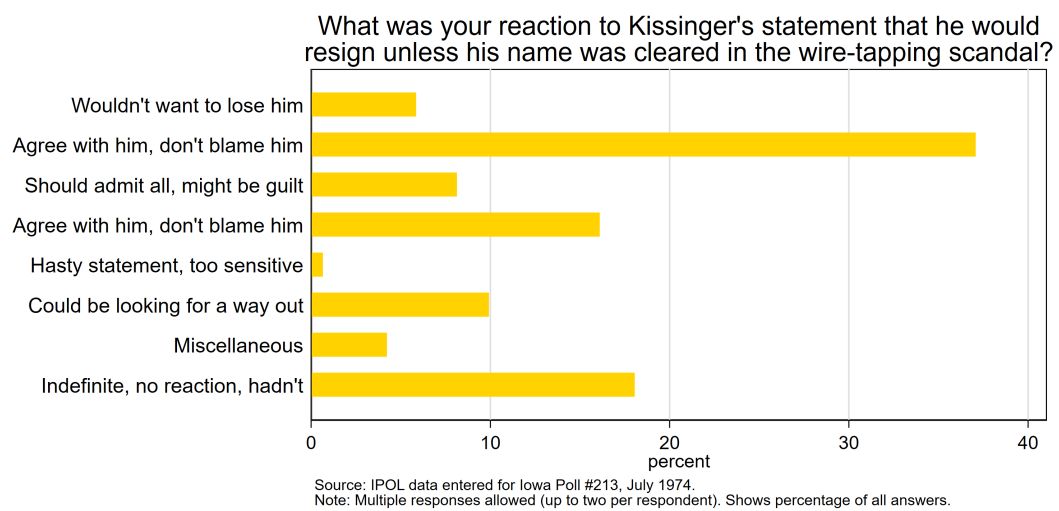

Figure 4.11: What was your reaction to Kissinger's statement that he would resign

A. Appendix: Iowa Poll #213 Details and Methods

In this appendix we provide some background on our efforts to restore these old Iowa Polls along with details about the methods we used to enter and validate the data.

A.1 Background

Starting in fall 2022, IPOL has been working to enter and analyze data from some recently unearthed Iowa Polls from the 1940s through the 1980s. These were discovered in the archives of Tom Mans, a 1978 UI PhD in Political Science. The Iowa Polls were conducted by the Des Moines Register. Around 1980 they were archived with the Social Sciences Lab at the University of Iowa. They moved around with Tom for years before Mary Kay Mans reached out to Professor Boehmke through the Iowa Social Science Research Center in 2021. She delivered the survey files and data to Iowa later that month.

The collection included two boxes of survey questionnaires for nearly 100 surveys from 1948 to 1978, associated reports, and two reel-to-reel tapes on which the data had been stored. We sent the tapes out for data retrieval, but unfortunately nothing useful could be extracted. Fortunately the boxes contained printouts of the entire data set for about two dozen surveys.

In fall 2022 IPOL began the process of hand-entering an entire survey from scans of the printouts. We started with Iowa Poll #213, conducted in July 1974. This report summarizes our findings from the questions included in that survey. Many of these questions were written up in the Des Moines Register in 1978, but we thought it would be interesting and fun to go back and learn about what Iowans thought about important and interesting issues at the time.

Eventually, we hope to release the data for public use. We have been working with UI Libraries, who house a collection of later Iowa Polls, and the Des Moines Register, which has been very helpful in sharing information on the Iowa Poll in general as well as specifics related to Iowa Poll #213 to help validate our data entry.

A.2 Information on Iowa Poll #213 Data

Here we provide an overview of the methods and details for Iowa Poll #213. The image below is copied from one of the Des Moines Register's articles based on data from this Iowa Poll.

Dates: July 1974.

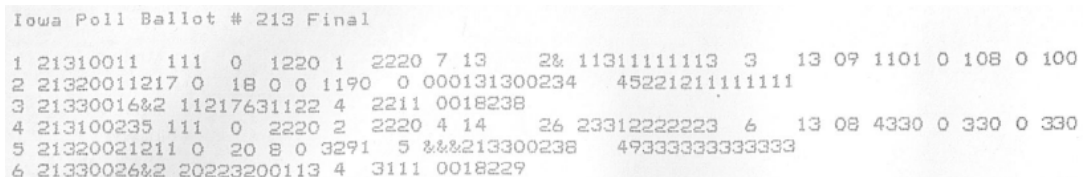

Sample: 601 voting-age residents in Iowa, margin of error $\pm 4.1\%$.

Respondent Identification: All respondents who stated they were over age 18 and willing to participate in the survey were included.

Weighting: Reported results are not weighted.

A.3 Data Entry

We scanned the paper printout of Iowa Poll #213 to pdf. See Figure A.1 for an example of the scanned file. This includes the first six lines of the data, which represents responses for two respondents. Note that while we had a copy of the questionnaire and the data, neither provides any indication which columns in the data set correspond to which questions (more on that later).

```

```

Figure A.1: Scan of Iowa Poll #213 data including 8 lines of data for the first two respondents

Each student was provided with a set of instructions, a text file template with lines 1-21 entered, and asked to enter the data into a text editor for lines 22-57 the first page. We then compared results to determine agreement rates for each entry, reinforced instructions, and proceeded to entering the rest of the survey data. This was done in two ways. One set of students hand-entered about 3 pages each. A second set of students reviewed and corrected a version obtained by exporting the original pdf to text format. This produced two entries for each item in the survey.

A.4 Data Validation

After the full data set was entered we compared each double-entered item to identify cases with disagreement. Out of a total of nearly 300,000 entered values, about 98.4% of them matched. A team of volunteers worked through the discrepancies to identify the correct entry and update the incorrect one. This continued until both versions of the data matched. At this point we had a complete data set, but no information about which columns corresponded to which questions.

A.5 Variable Identification

We identified the columns that recorded the responses for the questions on the survey through trial and error. As can be seen in Figure A.1, the first few columns include the Iowa Poll number followed by the row number for each respondent's data – which spanned three lines – and then followed by the respondent identifier.

From this starting point, we began by comparing the range of possible responses for each column to the associated numbers in the questionnaire. We quickly realized that the questions were recorded in the same order in which they were asked. From there we were able to identify the columns associated with the responses for most of the question, read them in, combine columns as needed, and create a full data set including variables for each question.

We suspect our matching of columns and questions is accurate, but we can not know for sure for every question. For one question related to reactions to the Nixon Watergate transcripts we were not able to match the numerical responses to the values in the questionnaire.

We should note the response options for some questions are not included in the questionnaire. For some, we made an educated guess. We suspected that the variable county, which was a two-digit number with values ranging from 3 to 99, would be based on an alphabetical listing of Iowa's 99 counties. A comparison of the number of respondents from each county to its population suggests that this assumption has merit.

For a few other variables the response options listed in the questionnaire did not line up with the values in the data. The numeric values for education did line up with the values in the questionnaire and the resulting percentages when we attempted to make them work differed substantially from other Iowa Polls around this time period. When we applied the coding from Iowa Poll #229, though, the values made sense and were in line with the distribution from that survey. Income has only values listed for 0 to 5 in the questionnaire, but values for 6 were included in the data. We assume the 6s represent a continuation of the ordered scale and left them as is in the data.

A.6 Missing or Unexpected Values

There are some included values that don't match those listed in the survey. Some of these were able to be inferred from question answers, for example, in some cases a "0" indicated a declined response whereas in other cases it might mean "Not Applicable". For questions with 10 or more response options, we suspect that an ampersand was used to represent "10" and an asterisk was used to represent "11". Yet other times an ampersand indicated an empty space used to split up values for multi-response questions. We were not able to resolve every such case, however, and when we could not we set the value to represent a coding of either "Out of range" or just "Missing".

B. Appendix: Tabulations

This appendix reports the full set of tabulations and cross-tabulations discussed in this report. We start with the tabulations of the demographic and other variables that we use in the cross-tabulations, and then report the tabulations and cross-tabulations for each thematic group of questions.

B.1 Cross-tabulation Variables
